The **PERGOLA®** is the ultimate awning system for larger residential spaces and Restaurant cafés. The Pergola® is available in many models to best fit your needs and application.

The **PERGOLA®** offers the convenience of a retractable awning roof, yet they offer moderate durability from inclement weather like rain and wind. The systems can also be fitted with roll down screens for extra weather protection.

COMBINE A STATIONARY FRAME with a retractable fabric...

For the ultimate comfort, add rolling zippered side shades with mesh fabric to eliminate the sun's glare and keep bugs from entering the space. The roll down shades can also be fitted with heavy duty vinyl fabric and clear vinyl windows for keeping moderate weather at bay.

PERGOLA® Level on a private residence

PERGOLA® Model Wood Plus

All **Pergola®** models are custom built to fit each area. The fabric is manufactured in one piece, even on wider awnings to prevent water leaking. Wider units therefore have multiple framing supports added to ensure a strong framework. Multiple units can also be mounted together with a gutter system in between for even wider widths. An integrated guttering system avoids water leakage.

The Pergola can be mounted to most walls and decks. It can even be constructed as a free standing module on your deck or concrete pad.

Some smaller systems can be manually operated with a hand crank. Larger systems are conveniently operated with an integrated tubular motor and are conveniently controlled with a hand held remote. With the remote the Pergola® will extend and retract automatically.

Now you can utilize your patio area during fierce mid-day sun and inclement weather. Feel free to inquire with your SUNAIR® awning expert on which system is best for you.

SUNPROOFING AMERICA!™
