

SUNAIR® Retractable patio awning

The Sunair® retractable patio awning model is our finest most versatile model of our retractable awning line. This product has evolved over the years as a top of the line awning product on the market using only the finest materials, with extremely attractive styling. The Sunair® model also comes standard with many of options not normally associated as standard on other awning systems.

Type	Standard Frame Colors	Standard Widths	Standard Projections	Recommended Applications	Recommended Fabrics
Lateral Arm Awning	9 standard Sunair colors	Through 32' 40' possible	4'2", 5'7" 6'11", 8'7", 10'2", 11'6", 13'0", 14'0"	Deck, Patio & Storefront	Sunbrella, Tempotest / Para, Sattler, & Recasens

- Highest quality Lateral Arm Awning.
- Forged aluminum elbow and shoulder components.
- Double stainless PVC coated cable arm design for durability.
- 4:1 / 8:1 Bevel gear for most efficient operation.
- All aluminum extruded front bar, Torsion bar, and roller tube.
- Powder coated components and extrusions.
- A stop in the gear to prevent the fabric from over rolling.
- Stainless steel fasteners.
- Optional: One-piece aluminum hood system.
- Optional: XP Cross over arm & Valance Plus.

Revised 02/15/2023

Retractable Deck and Patio Awning Installations

<u>SUNAIR® MODEL FEATURES:</u>		<u>COMPETITION</u>	<u>SUNAIR® BENEFIT:</u>
ARMS		Others typically uses all Die-cast or extruded aluminum arm parts and one or two springs to save on cost.	Forged aluminum arm components are stronger than all die castings or extrusions resulting in a stronger awning against the elements. Three heavy duty steel springs provide better arm tension and longer arm life.
FLEXIBILITY		Most systems use a single front pin that only moves in one direction.	Our unique two way movable front arm attachment relieves strain, increases flexibility and strength in the arm which reduces damage.
ELBOW		Typically the competition uses a single smaller cable which is not always coated. Most systems do not have this angle and the fabric rubs on the arms.	Twin covered cables are far superior to a single cable, as cable wear is reduced, allowing better arm and fabric tension and durability. The elliptical cable radius increases tension as the awning extends. The angles help keep the fabric from dragging on the arms.
GEARS		The competition often uses inferior quality 7:1 gears without a stop	The 4:1 gear is the most efficient gear made. This gear minimizes the time and effort needed in operating a manual awning. The stop eliminates fabric damage due to over rolling.

<u>SUNAIR® MODEL FEATURES cont.</u>		<u>COMPETITION</u>	<u>SUNAIR® BENEFIT:</u>
PROFILES & PAINT		All extrusions and components are exclusively made of the highest quality aluminum. The extrusions and aluminum parts all electro statically powder coated.	The competition often mixes aluminum and steel profiles to save on cost. Competitors very often actually wet – lacquer the extrusions to save on cost. Aluminum extrusions are strong, yet will not corrode over time like steel. This equates to a longer lasting awning. Powder coating is more attractive and holds up better against the elements, resisting cracking and peeling.
FABRICS		Hundreds of 100% acrylic premium grade solid and striped fabric colors to choose from. You surely will find a fabric to suite your need and taste.	Sometimes the competition uses vinyl or a non acrylic fabric. Some companies use poor quality lighter thickness acrylics fabrics. Acrylic fabric is more attractive and breaths better than vinyl. Vinyl traps heat and will crack over time. Acrylic fiber is also resistant to fading and mildew and has a water repellant Teflon coating.
THREAD		All fabrics are sewn with Tenara® thread. This thread is manufactured from GORE-Tex, and is clear and nearly invisible.	The competition typically uses a synthetic thread. Often the competition cuts corners and uses only a white thread which is very visible on the fabric. Tenara® thread is made of Teflon and will not deteriorate from exposure to the elements. The clear thread is nearly invisible on most fabric colors.

Note: Available features
will vary by model

THE SUNAIR IS THE CLEAR CHOICE!

SUNAIR® Cross section

BENEFITS OF AWNINGS

- Reduces indoor temperatures and energy costs while keeping you cool on your deck or patio.
- Reduce heat gain inside by as much as 77% and reduce sunlight and glare through your window by as much as 94% (see Minnesota energy study).
- A Sunair awning keeps you cool on your patio or deck, but it also minimizes your exposure to the sun's harmful rays.
- A Sunair® retractable awning will increase your outdoor living area comfortably and efficiently at a fraction of the cost of a permanent addition
- Increases the value of your home.

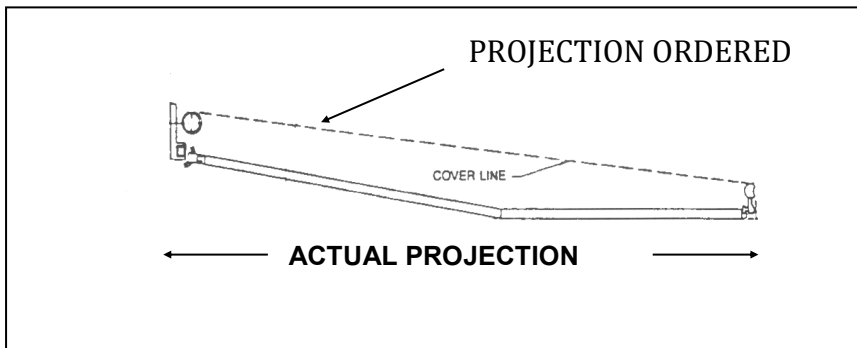

MEASURING A LATERAL ARM AWNING:

WIDTH:

The width is based upon the size of the deck. Due to the large sizes of some decks it is not always necessary to cover the entire deck. Make sure the wall is free of down spouts, chimneys and electrical conduit. Any object protruding out from the wall will interfere with the roller mechanism. Note the hood is always 1" wider than the width of the awning frame. The fabric width is always 5" less than the awning frame on units up to 20' wide, and 5 1/2" less on units over 20' wide. If the deck faces the West, then projection is important to consider. If the deck faces South, then width is important to consider.

The roller assembly of the SUNAIR® measures 8" high without a hood and 10" high with a hood. Be certain that you have at least 8 – 10" of unobstructed mounting surface.

The SUNAIR® Lateral Arm Awning is designed for residential decks, patios and commercial storefronts. Smaller projections should be used for a storefront awning. The awnings are designed for sun protection; they are not designed to withstand wind or heavy rain and should not be sold for such purposes (see warranty).

PROJECTION:

Determine the ground clearance above the door or window and then determine the desired projection. Refer to the pitch chart on next page for the ideal mounting height and pitch for the desired projection. The greater the pitch on the awning the less projection it will have (see pitch chart). When the awning is extended the front bar should be at least 7 ft. off the deck or patio. On a commercial installation the distance from the ground to the front bar should be at least 8 ft. depending on local codes. The pitch chart indicates that for every 12" of projection of the awning the mounting brackets should be located 3" higher than the front bar when the awning is extended (3/12 rule).

PITCH CHART AND IDEAL MOUNTING HEIGHT

For example: The brackets on an awning with 10' projection needs to be mounted 9'6" from the ground on a residential installation, $10' \times 3'' = 2'6''$ & $2'6'' + 7' = 9'6''$). Because the ideal pitch may not always be attained, it is possible to install the awning lower than the ideal pitch. While the "3/12" rule is ideal, it is perfectly fine to install the awning with a 2/12 pitch. A 1/12 pitch is absolute minimum. Maximum pitch is 45°.

Note: A good rule of thumb is never to install a Lateral Arm Awning below 8 feet at the top of the installation bracket. If only eight feet is attainable do not install an awning with more than 10'2" projection. If the installation height is too low or the desired projection is too great for the available space the awning may have to be installed on the roof (see the installation manual for each individual model).

OPTIONS:

OPTIONAL HOOD

Sunair® offers an optional aluminum one piece hood, made from the highest quality aluminum. The hood protects the fabric when the awning is in retracted position. With the aluminum hood, your awning is always automatically covered when you retract it. If the awning is mounted under an overhang protruding at least 10", then the optional hood is not needed.

SUNAIR® XP CROSSOVER ARMS

If the area on the wall to mount the awning on is very narrow, but a larger projection is desired, the Sunair model with "XP Crossover" arms offers the ability to overlap the arms in order to fit larger projection arms onto a narrow frame. This cross-arm version is available when the desired projection exceeds the width. The roller assembly is 15" tall requiring a larger 12" valance.

VALANCE PLUS

The Valance Plus is an optional roll down drop valance. This valance is great for extra shade on western exposures when the sun is low on the horizon. Valance height is 43" – 48" high depending on fabric chosen. This option is available motorized or manual. If motorized you need to upgrade to a Telis 4 multi channel remote.

Available standard with Ferrari Soltis 86 or Recscreen 5000P mesh. You can also choose an acrylic fabric. Darker mesh fabrics will block the sun and also maintain some view through the fabric. Note: maximum allowable width on mesh vs acrylic.

SUNAIR® MODEL:

Maximum "projection" manual operation 13' proj.

Maximum projection "motorized" operation 11' 6" proj.

Maximum "width" of unit acrylic fabric 20'

Maximum "width" mesh fabric 24' (Soltis 86 & P5000)

SUNSTAR® MODEL:

Maximum "projection" manual operation 10' proj.

Motorized not available

Maximum "width" of unit acrylic fabric 20'

Maximum "width" mesh fabric 24' (Soltis 86 & P5000)

OPTIONAL LED KITS FOR YOUR LATERAL ARM AWNING

SOMFY LIGHT KITS

- Available in warm white and cool white colors.
- Kits available for arms on awning system.
- Compatible with the Sunea SOMFY manual override motor only.
- Uses a Dimmable remote lighting kit.
- Use a multi channel remote.
- Lights installed in the field by dealer.

SUNAIR LIGHT KITS

5MM ILUMA™ LIGHT STRIPS

- Available in warm white color.
- Kits available for arms and front bar .
- Compatible with the Sunea SOMFY manual override motor and can be used with other motor systems as well.
- Uses a Dimmable remote lighting kit.
- Use a multi channel remote.
- Lights installed at the Sunair factory during assembly.

AU41 AWNING ASSIST BRACES

8 ft. Long
Minimum 2 posts needed per awning.
One (1) post per arm needed.
If 3 arms, 3 posts needed.
For Sunair®, Sunstar®, and Sunchoice® models only (Not for Suntube® model).
Must be released before operating awning.

AU41 Available Colors:

White, Mocha, Ivory, Black

Note: colors may not match exactly with awning frame.

Sunair® Front

Sunstar® Front

ASSIST BRACES cont.

Typical Installation of the manually operable pole brace to a typical existing awning canopy

- A1 Top end of pole brace secured to bottom slot channel of existing front linear aluminum extruded channel.
- A2 Lower end secured to a existing rail or wall.
- B1 Top end of pole brace secured to rear slot channel of existing canopy front linear aluminum extruded channel.
- B2 Lower end secured to a existing ground building surface.
- C During the partial projection of a existing awning canopy the lower end of pole brace may be secured to ground surface or side rail or wall.

8 ft. posts can be cut down to desired length.

NOTE: The Assist braces provide added stability to a retractable awning when it is extended. Adding these posts does not make the awning into a stationary awning. There is also no guarantee the awning will not be damaged in wind. Damage to awning or property is NOT covered by the Sunair® warranty. Please see warranty and separate instructions for proper use of these posts.

BINDING

VALANCE STYLES

Note:

“A” style straight valance is available with either binding sewn in at bottom, or bottom hem, without binding. All remaining valance styles must have a binding sewn in at bottom (see binding color chart).

Standard valance styles are listed here. Some styles may vary depending on the pattern and where the stripes fall. If a custom valance is required, include a well-dimensioned sketch with the order as well as instructions on style. Our standard valance is “E”, if no valance style is specified, we use “E”.

MOTORIZATION

Awnings

Exterior Screens

Pergolas

Roller/Solar Shades

Sunair is proud to offer the full line of Somfy motors and controls for our awnings and screens program. SOMFY RTS features motors with an integrated radio receiver that allows you to operate the awning by remote control with a wall mounted or hand held remote or by smart phone device. With a simple click of your remote, the awning or shade will extend or retract automatically. The manual override Sunea motor is ideal for awnings and the Altus motors is ideal for exterior screens. Each motor can be configured with a cord & plug which can simply be plugged into your patio outlet. They are available in 1.4", 11', 17', & 23' lengths. Altus motor cords depend on motor model and is standard either 6' or 10' pigtail cords. Optional Altus plug in cords are available in 10', 18', and 24' lengths. Optional screen motor is Maestria with obstacle detection. Add Tahoma smart phone and table interface.

Sunea quick connect

ALTUS®

Twist & Lock Fast Connector Solution for 500 Series Motors

Available 500 Series Motor cable options Q4 2019

SUNEA CORDS*

- Optional LT50 pigtails :
 - 1.6FT SJTW pigtail with LT50 plug on one end & FC on the other
 - 4 conductor version for Wired motors
 - 3 conductor version for RTS & SDN motors
- Optional extensions in various lengths for both 4 & 3 conductor cables.
 - same extensions for all AC motors - Sunea, Dia. 40 & 50 ranges
 - interior & exterior rated
 - simplify our offer and standardize going forward with the possibility to totally eliminate the Anderson connector

- Version 4 Conductors (for WT motors – mechanical LSUs)

- Version 3 Conductors (for RTS & SDN motors – electronics LSUs)

*Sunea motor pigtail cord is 18". Optional available plug cord lengths are 1.4', 11', 17', and 23'. These cords come with a molded plug that can be plugged into an outlet.

SOMFY REMOTES:

Telis 1 & 4 RTS
Hand-held Remotes

Situ 1 & 4 hand
held remotes

One (1) through (16) channel hand held or wall mounted remotes are available. Remotes are available in different colors to suit your style, please inquire.

Telis hand-held remotes offer convenient and simple operation of every type of motorized application. Channels help organize the motorized products that are operated. Single channel remotes can operate one individual product or one group of motorized products. Multiple channel remotes can handle groups of motorized products.
